

Acquire

An optional module within Floral's S.M.A.R.T. Central product suite that streamlines central ingest systems.

AssetDispatcher is a transfer agent that uses regional dub-lists and programming settings to push commercial and program content from a centralized ingest location to regional sites after material has been approved.

Timing and all metadata can be entered once and shared by all.

The screenshot shows the 'Asset Dispatcher Monitor - Floral Systems' interface. It features three columns for different transfer agents: KFSI, NFSI, and WFSI. Each column includes a status indicator (green checkmark), address, and 'In Service' checkbox. Below each agent is an 'Assets info' table with columns for House name, State, and Error.

House name	State	Error
HD5050	52%-3Mb/s	
HD2020	Ready	
HD1010	To Be Approved	
HD3030	To Be Approved	
HD7070	To Be Approved
